LIST OF FIGURES

Figure 1 *Glaciers* form an important part of the earth's climate system. 10

LIST OF TABLES

Table 1 Volume formulas for geometric solids 12

Glossary

***PK* – pharmacokinetics**: The study of how a drug is absorbed, distributed, metabolized, and excreted by the body. 13

1 Introduction

This is a basic example of **typesetting** with Typst. Check out this math formula:

$$v(t) = \lim_{t \to \infty} \int_t^\infty c \cdot \sqrt{t^2} \, \mathrm{d}t$$

1.1 Sub-section

2 Methods

2.1 Sub-section

3 Results

3.1 Sub-section

4 Conclusions

4.1 Sub-section

4.1.1 Sub-section

4.1.1.1 Sub-section

4.1.1.1.1 Sub-section

4.1.1.1.1.1 Sub-section

5 Adding a bulleted list

1. The climate
2. The topography
3. The geology

6 Adding a figure

Figure 1: *Glaciers* form an important part of the earth's climate system.

This is the figure description. It spans the full page width and provides additional context about the glaciers shown above.

A picture of melting glaciers is in Figure 1. This is also described in [1]

7 Adding an equation

The equation $Q = \rho A v + C$ defines the glacial flow rate. A block of equations to be added.

8 Adding a table

Table 1: Volume formulas for geometric solids

	Volume	**Parameters**
$\pi h \frac{D^2 - d^2}{4}$	h: height D: outer radius d: inner radius	$\frac{\sqrt{2}}{12} a^3$
a: edge length		

This is the table description. It provides additional context about the volume formulas listed above.

9 Adding a glossary term

The pharmacokinetics (PK) are modeled using a 1-compartment model
