List of Figures

Figure 1 *Glaciers* form an important part of the earth's climate system. 7

List of Tables

Table 1 Volume formulas for geometric solids 7

1 Introduction

This is a basic example of **typesetting** with Typst. Check out this math formula:

$$v(t) = \lim_{t \to \infty} \int_t^\infty c \cdot \sqrt{t^2} \, \mathrm{d}t$$

1.1 Sub-section

4.1.1.1.1 Sub-section

4.1.1.1.1.1 Sub-section

1. The climate
2. The topography
3. The geology

Figure 1: *Glaciers* form an important part of the earth's climate system.

This is the figure description. It spans the full page width and provides additional context about the glaciers shown above.

A picture of melting glaciers is in Figure 1. This is also described in [1]

The equation $Q = \rho A v + C$ defines the glacial flow rate.

Table 1: Volume formulas for geometric solids

	Volume	**Parameters**
$\pi h \dfrac{D^2 - d^2}{4}$	h: height D: outer radius d: inner radius	$\dfrac{\sqrt{2}}{12} a^3$
a: edge length		

This is the table description. It provides additional context about the volume formulas listed above.

A block of equations to be added.
